SURFACE TRANSPORTATION BOARD

DECISION

STB Ex Parte No. 290 (Sub-No. 5) (2008-3)

QUARTERLY RAIL COST ADJUSTMENT FACTOR

Decided: June 17, 2008

In Railroad Cost Recovery Procedures, 1 I.C.C.2d 207 (1984), the Interstate Commerce Commission (ICC) outlined the procedures for calculating the all-inclusive index of railroad input prices and the method for computing the rail cost adjustment factor (RCAF). Under the procedures, the Association of American Railroads (AAR) is required to calculate the index on a quarterly basis and submit it on the fifth day of the last month of each calendar quarter. In Railroad Cost Recovery Procedures, 5 I.C.C.2d 434 (1989), aff'd sub nom. Edison Electric Institute, et al. v. ICC, 969 F.2d 1221 (D.C. Cir. 1992), the ICC adopted procedures that require the adjustment of the quarterly index for a measure of productivity.

The provisions of 49 U.S.C. 10708 direct the Surface Transportation Board (Board) to continue to publish both an unadjusted RCAF and a productivity-adjusted RCAF. In Productivity Adjustment-Implementation, 1 S.T.B. 739 (Productivity Adjustment), the Board decided to publish a second productivity-adjusted RCAF called the RCAF-5. Consequently, three indices are now filed with the Board: the RCAF (Unadjusted), the RCAF (Adjusted), and the RCAF-5. The RCAF (Adjusted), which reflects national average productivity changes as originally developed and applied by the ICC, is currently based on a 5-year moving average. The RCAF-5 reflects national average productivity changes as if a 5-year moving average had been applied consistently from the productivity adjustment's inception in 1989.

The index of railroad input prices, RCAF (Unadjusted), RCAF (Adjusted), and RCAF-5 for the third quarter 2008 are shown in Table A of the Appendix to this decision. Table B shows the first quarter 2008 index and the RCAF calculated on both an actual and a forecasted basis. The difference between the actual calculation and the forecasted calculation is the forecast error adjustment.

Both the RCAF (Adjusted) and the RCAF-5 are currently calculated using a 5-year moving geometric average of productivity change for U.S. Class I railroads. An average productivity change rate of 1.012 (1.2% per year) for the period 2002-2006 is currently used for the RCAF (Adjusted). In accordance with Productivity Adjustment, 1 S.T.B. at 748-49, the RCAF-5 will continue to use the 2001-2005 average productivity change rate of 1.017 (1.7%) until January 1, 2009.

We have examined AAR's calculations for compliance with our procedures and find that the third quarter 2008 RCAF (Unadjusted) is 1.147, an increase of 6.5% from the second quarter 2008 RCAF of 1.077. The RCAF (Adjusted) is 0.527, an increase of 6.0% from the second quarter 2008 RCAF (Adjusted) of 0.497. The RCAF-5 is 0.500, an increase of 6.2% from the second quarter 2008 RCAF-5 of 0.471.

This decision will not significantly affect the quality of the human environment or the conservation of energy resources.

Pursuant to 5 U.S.C. 605(b), we conclude that our action will not have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act.

AUTHORITY: 49 U.S.C. 10708.

It is ordered:

1. The Board has approved the third quarter 2007 Rail Cost Adjustment Factor (Unadjusted) of 1.147, RCAF (Adjusted) of 0.527, and RCAF-5 of 0.500.
2. Notice of this decision will be published in the Federal Register.
3. The effective date of this decision is July 1, 2008.

By the Board, Chairman Nottingham, Vice Chairman Mulvey, and Commissioner Buttrey.

Anne K. Quinlan
Acting Secretary

Endnotes:

¹ “Other Items” is a combination of Purchased Services, Casualties and Insurance, General and Administrative, Other Taxes, Loss and Damage, and Special Charges, price changes for all of which are measured by the Producer Price Index for Industrial Commodities Less Fuel and Related Products and Power.

² Linking is necessitated by a change to the 2006 weights beginning in the fourth quarter 2007. The following formula was used for the current quarter’s index:

$$\frac{3^{\text{rd}} \text{ Qr. 2008 Index}}{(2006 \text{ Weights})} \text{ Times } 1^{\text{st}} \text{ Quarter Linked Index (1980 = 100 Linked)} = \text{Equals Linked Index (Current Quarter)}$$

Or

$$\frac{291.8}{267.8} \times 260.9 = 284.3$$

³ The first quarter 2008 RCAF was rebased using the October 1, 2007, level of 245.9 in accordance with the requirements of the Staggers Rail Act of 1980 (10/1/2007 = 100).

⁴ The third quarter 2008 forecast error adjustment was calculated as follows: a. first quarter 2008 RCAF using forecasted data equals 103.5; b. first quarter 2008 RCAF using actual data equals 102.6; c. The difference equals the forecast error (b-a) of -0.9. Since the actual first quarter value is less than the forecast value, the difference is subtracted from the Preliminary RCAF.

⁵ The third quarter 2008 RCAF Adjusted (0.527) is calculated by dividing the third quarter RCAF Unadjusted (1.147) by the third quarter productivity adjustment factor of 2.1748. The third quarter 2008 productivity adjustment factor is calculated by multiplying the second quarter 2008 productivity adjustment of 2.1683 by the fourth root (1.0030) of the 2002-2006 annual average productivity growth rate of 1.2%.

⁶ The third quarter 2008 RCAF-5 (0.500) is calculated by dividing the third quarter 2008 RCAF Unadjusted (1.147) by the third quarter productivity adjustment factor-5 (PAF-5) of 2.2955. The third quarter 2008 productivity adjustment factor-5 (PAF-5) is calculated by multiplying the second quarter 2008 PAF-5 of 2.2859 by the fourth root (1.0042) of the 2001-2005 annual average productivity growth rate of 1.7%.
