SURFACE TRANSPORTATION BOARD

DECISION

Docket No. EP 290 (Sub-No. 5)

(2024-3)

QUARTERLY RAIL COST ADJUSTMENT FACTOR

Digest:¹ The rail cost adjustment factor (RCAF) is an index formulated to represent changes in railroad costs incurred by the nation's largest railroads over a specified period of time. The Surface Transportation Board (Board) is required by law to publish the RCAF on at least a quarterly basis. Each quarter, the Association of American Railroads computes three types of RCAF figures and submits those figures to the Board for approval. The Board has reviewed the submission and adopts the RCAF figures for the third quarter of 2024.

Decided: June 14, 2024

In Railroad Cost Recovery Procedures, 1 I.C.C.2d 207 (1984), the Interstate Commerce Commission (ICC) outlined the procedures for calculating the all-inclusive index of railroad input prices and the method for computing the rail cost adjustment factor (RCAF). Under the procedures, the Association of American Railroads (AAR) is required to calculate the index on a quarterly basis and submit it to the agency on the fifth day of the last month of each calendar quarter. In Railroad Cost Recovery Procedures—Productivity Adjustment, 5 I.C.C.2d 434 (1989), aff'd sub nom. Edison Electric Institute v. ICC, 969 F.2d 1221 (D.C. Cir. 1992), the ICC adopted procedures that require the adjustment of the quarterly index for a measure of productivity.

The provisions of 49 U.S.C. § 10708 direct the Surface Transportation Board (Board) to continue to publish both an unadjusted RCAF and a productivity-adjusted RCAF. In Productivity Adjustment—Implementation, 1 S.T.B. 739 (1996), the Board decided to publish a second productivity-adjusted RCAF called the RCAF-5. Consequently, three indices are now filed with the Board: the RCAF (Unadjusted); the RCAF (Adjusted); and the RCAF-5. The RCAF (Unadjusted) is an index reflecting cost changes experienced by the railroad industry, without reference to changes in rail productivity. The RCAF (Adjusted) is an index that reflects national average productivity changes as originally developed and applied by the ICC, the calculation of which is currently based on a five-year moving average. The RCAF-5 is an index

that also reflects national average productivity changes; however, those productivity changes are calculated as if a five-year moving average had been applied consistently from the productivity adjustment's inception in 1989.

The index of railroad input prices, RCAF (Unadjusted), RCAF (Adjusted), and RCAF-5 for the third quarter of 2024 are shown in Table A of the Appendix to this decision. Table B shows the first quarter 2024 index and the RCAF calculated on both an actual and a forecasted basis. The difference between the actual calculation and the forecasted calculation is the forecast error adjustment.

AAR's calculations have been examined by the Board's Office of Economics, and the Board finds that AAR has complied with agency procedures. The Board finds that the third quarter 2024 RCAF (Unadjusted) is 0.950, a decrease of 3.7% from the second quarter 2024 RCAF (Unadjusted) of 0.986. The RCAF (Adjusted) is calculated, in part, using the RCAF (Unadjusted) and a five-year moving geometric average of productivity change for U.S. Class I railroads from 2018-2022, which is 1.011 (1.1% per year). The third quarter 2024 RCAF (Adjusted) is 0.372, a decrease of 3.9% from the second quarter 2024 RCAF (Adjusted) of 0.387.²

In accordance with Productivity Adjustment—Implementation, 1 S.T.B. at 748-49, the RCAF-5 for this quarter will use a productivity trend for the years 2017-2021, which is 1.028 (2.8% per year). The RCAF-5 for the third quarter of 2024 is 0.353, a decrease of 4.3% from the second quarter 2024 RCAF-5 of 0.369.³

This action is categorically excluded from environmental review under 49 C.F.R. § 1105.6(c).

It is ordered:

1. The Board finds that the third quarter 2024 RCAF (Unadjusted) is 0.950, RCAF (Adjusted) is 0.372, and RCAF-5 is 0.353.
2. Notice of this decision will be published in the Federal Register.

² The third quarter 2024 RCAF Adjusted (0.372) is calculated by dividing the third quarter 2024 RCAF Unadjusted (0.950) by the third quarter productivity adjustment factor (PAF) of 2.5568. The third quarter 2024 PAF is calculated by multiplying the second quarter 2024 productivity adjustment of 2.5499 by the fourth root (1.0027) of the 2018-2022 annual average productivity growth rate of 1.1%.

³ The third quarter 2024 RCAF-5 (0.353) is calculated by dividing the third quarter 2024 RCAF Unadjusted (0.950) by the third quarter productivity adjustment factor-5 (PAF-5) of 2.6934. The third quarter 2024 PAF-5 is calculated by multiplying the second quarter 2024 PAF-5 of 2.6749 by the fourth root (1.0069) of the 2017-2021 annual average productivity growth rate of 2.8%.

3. The effective date of this decision is July 1, 2024.

By the Board, Board Members Fuchs, Hedlund, Primus, and Schultz.

Endnotes:

¹ “Other Items” is a combination of Purchased Services, Casualties and Insurance, General and Administrative, Other Taxes, Loss and Damage, Lease Rentals, and Special Charges, price changes for all of which are measured by the Producer Price Index for Industrial Commodities Less Fuel and Related Products and Power.

² Linking is necessitated by a change to the 2022 weights beginning in the fourth quarter of 2023. The following formula was used for the current quarter’s index:

$$\frac{\text{3rd Qr. 2024 Index}}{\frac{\text{(2022 Weights)}}{\text{2nd Qr. 2024 Index}} \text{ (2022 Weights)}} \text{ Times 2nd Quarter Linked Index (1980 = 100 Linked) Equals Linked Index (Current Quarter)}$$

Or

$$\frac{365.0}{363.2} \times 334.8 = 336.5$$

³ The first quarter 2023 RCAF was rebased using the October 1, 2022 level of 342.3 in accordance with the requirements of the Staggers Rail Act of 1980 (10/1/2022 = 100).

⁴ The third quarter 2024 forecast error adjustment was calculated as follows: (a) first quarter 2024 RCAF using forecasted data equals 98.1; (b) first quarter 2024 RCAF using actual data equals 94.8; and (c) the difference equals the forecast error (b-a) of -3.3. Because the actual first quarter value is less than the forecast value, the difference is subtracted from the Preliminary RCAF.
